Adrabetadex ARM Scenario Summary

Scenario: Default 340B COE HOPD, Pass-Through Active

Site: HOPD | Payer: Medicare | 340B: Yes | Coding: Pass-through active

Sourcing: Buy-and-bill | Pass-through status: Active | Reimbursement basis: WAC % | Generated: 2026-04-22

Annual Economics

Annual administrations	**26**
Annual drug acquisition	**$779,766.00**
Annual allowed drug reimbursement	**$1,044,420.00**
Annual non-drug operating cost	**$44,200.00**
Annual net operating margin	**$195,916.95**
Annual break-even support	**$0.00**
Cash exposure	**$179,946.00**
Annual 340B acquisition advantage	**$234,234.00**

Per-Dose Economics

Drug acquisition per dose	**$29,991.00**
Allowed drug reimbursement per dose	**$40,170.00**
Drug spread per dose	**$10,179.00**
Procedure revenue per dose	**$500.00**
Non-drug operating cost per dose	**$1,700.00**
Denial drag per dose	**$950.73**
Financing drag per dose	**$493.00**
Net operating margin per dose	**$7,535.27**
Break-even support per dose	**$0.00**

Risk Flags

Margin risk — **Low margin risk**

Per-dose margin has stronger cushion.

Cash exposure risk — **Moderate cash exposure**

Monitor outstanding administrations and remittance timing.

Operational risk — **Lower operational risk**

Operational assumptions are relatively stable.

Interpretation

In this scenario, 340B acquisition and pass-through-active HOPD payment can create a stronger reimbursement cushion, but clean PA, NDC capture, coding, billing, and documentation still determine realized payment and margin.

Estimates are planning assumptions and scenario-specific only, they do not guarantee coverage, coding, payment, or reimbursement. Providers should verify payer-specific and site-specific requirements.
